

# CERTIFIED INVOICING SYSTEM (CIS)

- flexible solution and easy compliance -

## Certified Invoicing System

**(CIS)** means an electronic system

designated for use in business for efficiency management controls in areas of sales analysis and stock control system.

In practice, it is any cash register, point of sale system or similar business machine that print receipts or invoices and functions as an analytical sales device and stock control system.

Every CIS must meet requirements specified by the Authority.

**Sales Data Controller (SDC)** is a device controller connected to CIS used for processing and storing receipts. It may be an external module, embedded in another machine (like an electronic cash register) or it may be manufactured with the CIS as a single unit. Its role is to record every transaction received from the CIS and to ensure that an electronic signature is printed on each physical and digital receipt or invoice.

**Virtual Sales Data Controller (V-SDC)** is a software version of SDC, a solution for preventing tax evasion designed to apply Tax Authority approved encryption algorithm to electronically stamp and safeguard details of receipt/invoice and justify tax liability for the issuer.

Online and offline options covering all business models with local and remote unified audit capabilities.

# COMMITMENT TO TRANSPARENCY AND FRAUD PREVENTION

DTI is helping the Government prevent TAX frauds. Over the last decade, we have delivered solutions that have been providing Revenue Authorities with advanced notice of every commercial transaction in a manner that would allow risk analysis and remote audit.

We are superior in consultancy, provide various certification methods for invoicing systems and offer hardware and software development. All DTI solutions are ITAS independent, in support of multi-vendor environment and transparency.

We are offering custom-made solutions that are beneficial for both the Government and its taxpayers.
